SKILLS

- Java
- Python
- SQL
- TypeScript and JavaScript
- React and Vite
- Flask
- SQLite and PostgreSQL
- Testing (JUnit 5, pytest)
- Git, GitHub and GitHub Actions
- HTML and CSS

LANGUAGES

- Portuguese (native)
- English (B1, intermediate)

CERTIFICATIONS

Algorithms and Programming Specialist

São Judas Tadeu University · 160 h · 2026

Fundamentals of UX Design and Human-Computer Interaction

São Judas Tadeu University · 160 h · 2026

Python

Santander Open Academy · 8 h · 2026

PROFILE

I am a Computer Science student and I challenge myself every day in search of more knowledge and experience. My projects were built to be used by myself, in my own daily routine. Available 30 hours/week.

PROJECTS

Tracker Responsável (Responsible Gaming Tracker)

2026

Java, HTML and SQLite

- Windows desktop app that, every time you open a game, asks whether you are done with your tasks and shows how many hours you have already played that week. It also has a Steam-inspired screen where you track when you played and how many hours on each game.
- Designed session logging in SQLite that avoids double-counting overlapping games and excludes time while the PC is asleep.
- Wrote 57 JUnit 5 tests with injected process reading, running on every push via GitHub Actions.

Painel Pessoal (Personal Dashboard)

2026

React 19 · TypeScript · Vite · Supabase · PWA

- Built a mobile-first daily dashboard (tasks, study log, books, calendar and weather), installable as a PWA and deployed on Netlify.
- Implemented authentication and real-time sync across devices, using optimistic updates and a local cache.
- Secured user data with PostgreSQL Row Level Security, so each user can access only their own records.

Monitor de Preços (Price Tracker)

2026

Python 3.13 · Flask · SQLite · pytest · GitHub Actions

- Built a web app that compares the price of the same product across Brazilian stores, parsing JSON-LD (schema.org) or HTML, with email alerts on 4% price drops.
- Integrated the official Mercado Livre API over OAuth 2.0 with PKCE and automatic token refresh.
- Wrote pytest suites that run offline against saved real store pages on every push.

EDUCATION

Bachelor of Science in Computer Science

2026 – present

São Judas Tadeu University · 2nd semester · expected graduation Dec 2030

- Current coursework: Applied Computational Mathematics; Software Design and Engineering.
