

Guilherme Waldemir da Silva Barros

Computer Science Student · Software Development and Data Analysis

São Paulo, Brazil guilhermewaldemir@outlook.com +55 11 95951-0657 guilhermewaldemir.github.io
github.com/GuilhermeWaldemir linkedin.com/in/guilherme-waldemir-da-silva-barros

OBJECTIVE

Internship in software development or data analysis, on a team where I can learn from production code and contribute early. Available 30 hours/week, mornings or afternoons.

EDUCATION

Bachelor of Science in Computer Science

São Judas Tadeu University · 2nd semester · Expected graduation: Dec 2030

Current coursework: Applied Computational Mathematics; Software Design and Engineering.

TECHNICAL SKILLS

Languages	Java, Python, SQL
Libraries and frameworks	Flask, Swing/AWT
Databases	SQLite, PostgreSQL (Supabase)
Testing	JUnit 5, pytest
Tools	Git, GitHub, GitHub Actions, Maven, Netlify, Render
Spoken languages	Portuguese (native); English (intermediate, B1)

PROJECTS

Tracker Responsável (Responsible Gaming Tracker)

Java 21 · Swing/AWT · SQLite · Maven · JUnit 5 — github.com/GuilhermeWaldemir/tracker-responsavel

- Built a Windows desktop app that detects games running in the background and shows, before each session, how many hours were already played that week.
- Designed session logging in SQLite that avoids double-counting overlapping games and excludes time while the PC is asleep.
- Wrote 19 JUnit 5 tests with injected process reading, covering sleep and week-rollover edge cases.

Painel Pessoal (Personal Dashboard)

React 19 · TypeScript · Vite · Supabase · PWA — painel-guilherme.netlify.app

- Built a mobile-first daily dashboard (tasks, study log, books, calendar and weather), installable as a PWA and deployed on Netlify.
- Implemented authentication and real-time sync across devices with Supabase, using optimistic updates and a local cache.
- Secured user data with PostgreSQL Row Level Security (RLS), so each user can access only their own records.

Monitor de Preços (Price Tracker)

Python 3.13 · Flask · SQLite · pytest · GitHub Actions · Render — github.com/GuilhermeWaldemir/monitor-de-precos

- Built a web app that compares the price of the same product across 5 Brazilian stores (Amazon, Mercado Livre, KaBuM! and others), parsing JSON-LD (schema.org) or HTML.
- Implemented same-item matching by manufacturer part number/EAN, price history charts and email alerts.
- Wrote 308 pytest tests that run offline against saved real store pages on every push via GitHub Actions.

COURSES AND CERTIFICATIONS

- **Algorithms and Programming Specialist** — São Judas · 160 h · Jul 2026
- **Fundamentals of UX Design and Human-Computer Interaction** — São Judas · 160 h · Jul 2026
- **Python** — Santander Open Academy · 8 h · Aug 2026
